FIELDWORK / REVIEW GUIDE

# Site Tracking Application Client Review

These documents describe the proposed application and its latest screen designs. Please review the workflow and usability before implementation.

## Read in this order

1. **02-Design-Walkthrough.pdf** — 8 pages showing the manager web app and the simpler employee mobile experience.
2. **03-System-Design.pdf** — business rules and technical reference. Start with sections 1–8 and the remaining decisions in section 14.

## Please check

- Can an employee understand the next job, add a photo, send a voice note and ask for material in their preferred language?
- Does the manager have the information and approvals needed to track sites and stages?
- Are linked sites, material approval/dispatch, consumption and returns correct for your operation?
- Are the proposed working calendar, location quality, media/cache limits and deployment choices acceptable?

## How to send feedback

Reply with the **document name, page number or screen, requested change, and priority** (Must change / Prefer / Question). We can demonstrate the interactive prototype during a review call.

**Review status**

Design draft, with illustrative data. Screens are a prototype; live recording, GPS, inventory transactions and offline synchronization are implementation work. Actual employee usability and language review should be validated before release.
